

Containment · Filling · Emptying  
**UniDock System**

- Transfer solution for standard big bags
- High containment level (OEB 4)
- Highly efficient, pressure tight system
- Simplified and reliable operation
- Standard (LPDE) or HighStress version available
- No contact with the product during operation
- CIP system (cGMP)

## UniDock System

**Dec's UniDock System\* allows the simplified charging and discharging of big bags, whilst ensuring a high containment level (OEB 4), efficiency and a reliable operation.**

It was specifically designed for solvent-moist products and is compatible with standard FIBCs. A protection sleeve excludes any contact with the product. With minimal cleaning efforts, the **UniDock System** combines essential advantages for the use of big bag filling and emptying tasks.

*\*patent pending*

*Attachment of big bag and intermediate liner with an O-Ring and a sealing ring.*

*Connection of the intermediate liner to the upper part of the UniDock System and removal of previous liner by the side sleeve.*

*Lifting and clamping of the sealing ring to the filling tube. The system is now ready for product transfer.*

*Abscission by cutting off the filled big bag underneath the ring with the help of a double clip.*

*Release and lowering of the ring and abscission of the intermediate liner by cutting off between the two clips.*

*Contained disposal of waste*
