

DecFill® SDA-300 Safety Device Assembly Machine

Safety device machines assemble pre-filled syringes and safety device types

- Processes various Syringe and Safety Device Sizes
- Reduced tooling for quick and easy size changeover
- Rejects nonconforming containers automatically

Technical Data	DecFill® SDA-300
Output	up to 300 containers/min
Electrical Supply	3 x 208V, 50/60Hz

DecFill® SDA-300 Safety Device Assembly Machine

Safety assembly machines for pre-filled syringes

Syringes are centered automatically by a cam-controlled centering system before they are pre-inserted into the safety devices. The transport belt feeds the pre-assembly into the final insertion station where

the device assembly is completed. The outer tools prevent activation while the inner tools gently push the syringe flange into position.
