## **Dec Group Announces Major Expansion Project to Enhance Manufacturing Capacity in Mauston, Wisconsin**

Ecublens (CH), October 28, 2024 - Dec Group is pleased to announce a significant expansion project that will double the manufacturing capacity at its Mauston, Wisconsin facility. This location serves as a full-cycle manufacturing hub for the Dec Group in North America and is one of the two operational sites in the United States.

Founded in 2009 as part of the group's global expansion from its headquarters in Ecublens, Switzerland, Dec-USA was established to better meet the local needs of its clients. The upcoming expansion marks the second substantial investment in Wisconsin by Dec Group, following the completion of the original facility in 2022.

A ceremonial groundbreaking event was held on October 24, 2024, with construction set to commence by the end of October 2024. The project is anticipated for completion by mid-2025.

Dec-USA specializes in custom manufacturing solutions for Dec Group products related to high-containment powder transfer, handling, and containment technologies. This facility provides integrated process equipment solutions across the Pharmaceutical, Nuclear, and Chemical industries, facilitating everything from raw material handling to the delivery of the final product.

"We are excited to embark on this expansion project, which underscores our commitment to increasing our manufacturing capabilities and enhancing service delivery to our clients," said Gabriela Mikhael, Global Marketing and Communication Manager. "This investment not only strengthens our position in the market but also highlights our ongoing dedication to the local Wisconsin community."

### **About Dec Group**

*Dec Group is a recognized global leader in the field of powder handling and process containment systems. With a strong commitment to safety, their products ensure the well-being of both operators and the products themselves.*

*A pioneer in advanced system concepts, Dec Group offers a wide range of solutions, from standard powder transfer systems to highly intricate integrated handling and processing equipment. These innovative systems not only boost productivity but also comply with the latest legal requirements, ensuring clients' peace of mind.*

*In recent years, Dec Group has experienced significant growth through strategic acquisitions of specialized companies. Today, the company proudly presents its product lineup in five distinct divisions: Powder Handling, Particle Sizing, Filling Solutions, Containment Solutions, and Continuous Processing Technologies. With this comprehensive range of offerings, Dec Group's vision of providing true end-to-end solutions, starting from the raw material input all the way to the final dosage form has been successfully transformed into reality.*
