

Teamlead Automation

Dec-Netherlands in Breda is part of the DEC group, from origin a Swiss company. Today approx. 800 people are working in subsidiaries all over the world. DEC offers both standard and highly complex fully integrated equipment solutions and concepts for various industries like bulk handling, milling, mixing, dosing isolator technology, containment solutions and aseptic processing solutions. Every day we strive to exceed our clients' expectations and build custom solutions for their needs. We specialize in sophisticated customer-specific equipment & services projects in the Life Science industries, primarily the Pharmaceutical (Human and Animal), Medical & Clinical Instrumentation and Food industries.

The challenge

Your main responsibility will be leading, guiding, and coaching a team of software engineers and hardware development engineer to ensure the high quality for software products and electrical design by establishing good habits and best practices.

You will be responsible for the technical output and architecture software decisions as well as the hardware (electrical) design. You are able to guide multiple projects simultaneously. Working together with project managers and participating in project meetings, you ensure requirements are met and delivered on time. You deliver estimates for software and hardware project timelines and regular software related status updates. As a team lead you provide evaluations of software products, adheres to a set of standards of development principles of hardware and software and deliver on budget solutions.

Being one of the authorities in your field of expertise you and your team trains the service engineers and end users in using the equipment and software. You and your team are involved in testing the machines to see your design come to life.

What's in it for you?

Working at Dec means being part of an ambitious and innovative organization. We stand for quality, teamwork, informal atmosphere, personal contact and building lasting relationships. Working in our line of business brings you high-tech challenges and enables you to think creatively to come up with never-seen-before solutions. Besides competitive salary benefits, we assure a career long learning curve in what you like most, solving technical challenges. Very good secondary working conditions.

The requirements

- A Technical bachelor's in computer science (or similar level acquired through experience);
- 10+ years of working experience in a similar position.
- A high understanding of available technical solutions.
- Experience in PLC programming (ladder logic, Siemens Step-7, TIA Portal, WinCC).
- Knowledge of standards such as GAMP5 and/or ISA-88 are considered a plus.
- Experience in generating project design documentation for software programs.
- Experience in design of software and hardware of machines for the pharmaceutical industry is a plus.
- Priority setting for the workload of your team.
- Good leadership skills and communication skills.
- Verbal and written proficiency in (technical) English is required; any proficiency in Dutch is preferred.

- Accurate and stress resistant.
- Willing to travel abroad during installation and testing of equipment on site at customers.
