

Containment

# Solid containment systems

- Reduce capital cost
- Reduced waste
- Maximized plant usage
- Reduced changing regimes

## Solid containment systems

**Dec's Solid Containment Systems are ideal for simple, safe handling of highly toxic products, dispensing into a number of aliquots or direct charging media.**

These closed systems avoid cross contamination and are available for sterile processing if required. Options include combined dispensing or compounding systems as a central dispensing system to distributive dispensing systems, or an integrated dispensing system in a contained process suite. The SCS has ACG weighing and accommodates a wide variety of input/output pack forms.

Ergonomically designed for ease of use, the SCS is CFR part 11 compliant.

### Features:

- Rapid batch turn round
- Smaller area to control
- Increased productivity
- Integrated processes
- Sterile processing
- Simplified maintenance
- Minimal cross contamination risk
- Ergonomic
- Rapid clean down
- Compliant
